DISTRICT DEVELOPMENT STATISTICAL REPORT

Illustrative dataset for testing Report Navigator

Reporting year: 2024–25

Coverage: Five fictional districts in the fictional state of Dakshin Pradesh

Important notice

This document is entirely synthetic. All district names, population figures, literacy rates, employment estimates, and other statistics are fictional and were created solely to test PDF extraction, table parsing, retrieval, calculations, and page citations. They do not describe any real government, state, district, or population.

Suggested test questions

- What is the total population across the five districts?
- Which district has the highest literacy rate?
- Compare the female literacy rates of Nandipur and Suryanagar.
- What is the unemployment rate in each district?
- What was the change in school enrolment between 2023–24 and 2024–25?
- Is a district-level poverty rate provided?

1. Executive Summary

This illustrative report presents selected development indicators for five fictional districts in Dakshin Pradesh. It is designed to contain both narrative passages and structured statistical tables so that document-intelligence systems can be tested against realistic report-like content.

Across the five districts, the combined estimated population is 5,000,000. Suryanagar records the highest literacy rate at 92.1%, while Devgarh records the lowest at 78.4%. The report includes population, literacy, employment, education, and health indicators.

The figures are point-in-time estimates for demonstration. They should not be interpreted as official statistics or used for policy, research, or public decision-making.

Table 1. District population and literacy indicators

District	Population	Male literacy (%)	Female literacy (%)	Total literacy (%)
Nandipur	1,250,000	91.0	83.0	87.0
Suryanagar	980,000	95.0	89.2	92.1
Devgarh	870,000	83.0	73.8	78.4
Kalyanpur	1,100,000	90.0	82.0	86.0
Madhavgarh	800,000	88.0	80.0	84.0

Source: Synthetic demonstration dataset. Population values are illustrative estimates.

2. Employment Indicators

Employment indicators are provided to test exact-value retrieval, ranking, and comparisons. The unemployment rate represents the fictional share of the labour force classified as unemployed in this demonstration dataset.

Table 2. Employment indicators by district, 2024–25

District	Labour force (persons)	Employed (persons)	Unemployed (persons)	Unemployment rate (%)
Nandipur	610,000	579,500	30,500	5.0
Suryanagar	470,000	451,200	18,800	4.0
Devgarh	390,000	362,700	27,300	7.0
Kalyanpur	520,000	494,000	26,000	5.0
Madhavgarh	360,000	342,000	18,000	5.0

Suryanagar has the lowest unemployment rate in this table at 4.0%. Devgarh has the highest rate at 7.0%. The difference between these two rates is 3.0 percentage points.

No district-level wage distribution, occupation breakdown, or informal employment estimate is included in this report.

Table 3. Employment by broad sector

District	Agriculture (%)	Industry (%)	Services (%)
Nandipur	34	22	44
Suryanagar	18	27	55
Devgarh	48	17	35
Kalyanpur	29	25	46
Madhavgarh	39	20	41

Sector shares sum to 100% for each district in this illustrative table.

3. Education Indicators

Education indicators include school enrolment for two academic years. The values below are fictional counts of enrolled students across all included school levels.

Table 4. Student enrolment by district

District	2023–24 enrolment	2024–25 enrolment	Change (students)
Nandipur	182,000	191,100	9,100
Suryanagar	151,000	158,550	7,550
Devgarh	126,000	129,780	3,780
Kalyanpur	164,000	172,200	8,200
Madhavgarh	113,000	117,520	4,520

The largest absolute increase in enrolment occurred in Nandipur, with 9,100 additional students. The percentage increase for Nandipur is 5.0%, calculated as (9,100 ÷ 182,000) × 100.

Table 5. School infrastructure

District	Primary schools	Secondary schools	Schools with electricity (%)
Nandipur	420	155	96
Suryanagar	310	132	99
Devgarh	365	118	88
Kalyanpur	390	149	94
Madhavgarh	285	105	91

The report does not provide teacher-to-student ratios or district-wise examination pass rates.

4. Health Indicators

The health section contains selected service-access indicators. These values are synthetic and are intended to test retrieval from tables with several similarly named columns.

Table 6. Selected health indicators

District	Health centres	Institutional births (%)	Full immunisation (%)	Doctors per 10,000
Nandipur	42	91	88	7.2
Suryanagar	38	96	94	9.1
Devgarh	31	82	79	5.4
Kalyanpur	40	90	87	6.8
Madhavgarh	27	86	83	6.1

Suryanagar has the highest institutional birth percentage (96%) and full immunisation percentage (94%) among the five districts. Devgarh has the lowest values for both indicators in this table.

The report does not contain district-level disease incidence, hospital bed occupancy, or health expenditure figures.

5. Definitions, Methodology and Data Availability

Population: Fictional estimated number of usual residents in each district for the 2024–25 reporting period.

Literacy rate: Fictional percentage of the population classified as literate in the illustrative dataset. The report does not specify an age threshold.

Labour force: Fictional number of persons included in the labour force estimate. Unemployment rate is calculated as unemployed persons divided by labour force, multiplied by 100.

Enrolment change: Difference between the 2024–25 and 2023–24 student enrolment counts. Percentage change is calculated relative to the 2023–24 count.

Data availability limitations

The following information is intentionally absent: district-level poverty rates, household income distribution, migration flows, crop yields, road length, detailed age-group population, and district-level public expenditure. A reliable question-answering system should report these as not found in this document rather than infer or fabricate values.

Suggested evaluation prompts

1. What is the combined population of all five districts?
2. Which district has the highest total literacy rate?
3. What is the literacy-rate difference between Suryanagar and Devgarh?
4. Which district has the highest unemployment rate?
5. Calculate the percentage increase in enrolment in Kalyanpur.
6. Which district has the most health centres?
7. What is the poverty rate in Madhavgarh?
8. Does the report provide average household income?

End of illustrative report. All content and statistics are fictional.
